

Dental Assisting Module 3

School: SoCal ROC

Course ID: 2421

Availability: Call 310-224-4200

Short Description

Do you have some experience in a dental office and want to earn the credentials to be a dental assistant? Are you needing a refresher or needing to renew your Infection Control certificate or your Radiation license? Have you completed dental assisting training, but need Pit and Fissure Sealants and Coronal Polishing training before you can take your Registered Dental Assisting exam? Then some or all of these modules are right for you!

Description

This course provides entry-level training designed to teach adult students the knowledge and necessary to perform as dental health care professionals. Students are taught to assist in all phases of general dentistry. Student are taught to perform chairside assisting. Students will be trained and certified in taking Dental X-rays, Coronal Polishing, and Pit & Fissure Sealants. Students are taught Infection Control, the California Dental Practice Act, and HIPAA. The course consists of five clinical modules. Upon successful completion of each module, students will earn the certificate(s) applicable to that module. Upon completion of all five modules, students will receive the Dental Assisting program certificate(s). After successful completion of the externship module, students receive the Externship certificate. Module I consists of the Dental Practice Act and the Dental Assisting Professional.

Prerequisite

Students must have minimal to some experience working in a dental office prior to starting the modules.

On the Job Training

Externship is mandatory for those using the modules to complete their dental assisting training, especially fo those planning to take the RDA exam after 11 months of experience working as a dental assistant.

UC Credit

None
